(54) **Dna sequencing by mass spectrometry**

(57) The invention describes a new method to sequence DNA. The improvements over the existing DNA sequencing technologies are high speed, high throughput, no electrophoresis and gel reading artifacts due to the complete absence of an electrophoretic step, and no costly reagents involving various substitutions with stable isotopes. The invention utilizes the Sanger sequencing strategy and assembles the sequence information by analysis of the nested fragments obtained by base-specific chain termination via their different molec-

ular masses using mass spectrometry, as for example, MALDI or ES mass spectrometry. A further increase in throughput can be obtained by introducing mass-modifications in the oligonucleotide primer, chain-terminating nucleoside triphosphates and/or in the chain-elongating nucleoside triphosphates, as well as using integrated tag sequences which allow multiplexing by hybridization of tag specific probes with mass-differentiated molecular weights.

EPO FORM 1503 (03.82) (P04C07)

European Patent  
Office

**INCOMPLETE SEARCH  
SHEET C**

Application Number  
**EP 02 01 6384**

Claim(s) not searched:  
47-62, 74-84

Reason for the limitation of the search:

Subject-matter of claims 47-62, 74-84 relates to species of ions. Not only is the material nature of such ions not clearly defined (e.g. an "ionized duplex" of undefined substance) in certain claims, but also are these ions defined by results to be achieved ("intact", "volatilized") rather than by clear technical terms. Also, the definition of "intact" and such features as "mass modified" lacks clarity. The claims therefore lack clarity and enablement to such an extent as to render a meaningful search of these claims impossible.

### CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

### LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
- ☐ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:
- ☒ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

1-27

European Patent  
Office

**LACK OF UNITY OF INVENTION**  
**SHEET B**

Application Number  
EP 02 01 6384

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. claims: 1-27

A method of concurrent sequencing two or more nucleic acids by mass spectrometry of base-specifically terminated nucleic acid fragments, wherein the fragments of the individual nucleic acids are distinguishable by molecular weight.

---

2. claims: 28-46, 85, 86, 88-99

solid supports linked to a mass-modified nucleic acid primer or to an elongated mass modified nucleic acid, insofar as not limited to the use in the method of invention 1

---

3. claim: 87

A microtiter plate comprising a solid support and a reversibly linked nucleic acid primer

---

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 01 6384

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
